<p>1. Minimum charges may apply</p> <p>2. Method detection limit (MDL) = the lowest concentration that can be measured with 99% confidence that the measured concentration is greater than zero. Method Detection Limit is determined at Flett by the procedure in EPA 40 CFR Part 136, Appendix B. The MDL is based on typical sample volumes or weights.</p> <p>3. Results are flagged below the EPA defined Minimum Level (ML) which generally corresponds to 10 times the standard deviations of the method blank.</p>
